

This device is part of the **International Trash Trap Network**

OVER 30 MILLION

TONNES OF PLASTIC WASTE
ENTERED GLOBAL AQUATIC
ECOSYSTEMS IN 2020

If we continue as we are, this number could increase three-fold by 2030.

Cleanup is part of the solution

Through installing trash traps around the world, the ITTN aims to increase the amount of waste collected annually as part of the International Coastal Cleanup™.

**CONNECTING LOCAL
SOLUTIONS TO TACKLE
GLOBAL PLASTIC POLLUTION**
